

AMENDMENTS TO THE CLAIMS

1-15. (Cancelled)

16. (New) An aseptic combination preparation to be mixed at the time of use by opening a partition wall which separates two or more chambers, comprising a solution containing a potassium salt which is divided and accommodated in the two or more separate chambers of one container,

wherein each of the solutions has a potassium ion concentration of about 2 to 40 mEq/L.

17. (New) The aseptic combination preparation according to claim 16, wherein the solution contains a sodium salt, a sugar and/or a bicarbonate salt in addition to the potassium salt.

18. (New) The aseptic combination preparation according to claim 16, wherein the container is a plastic container.

19. (New) An aseptic combination preparation to be mixed at the time of use by opening a partition wall which separates two or more chambers, comprising a solution containing at least one medicinal ingredient selected from the group consisting of a sodium salt, a sugar and a potassium salt which is divided and accommodated in the two or more separate chambers of one container,

wherein each of the solutions has an osmotic pressure ratio in the range of about 1 to 3 relative to physiological saline.

20. (New) The aseptic combination preparation according to claim 19, wherein the osmotic pressure ratio is about 1 relative to physiological saline.

21. (New) The aseptic combination preparation according to claim 19, wherein the container is a plastic container.

22. (New) An aseptic combination preparation to be mixed at the time of use by opening a partition wall which separates two or more chambers, comprising a solution containing a medicinal ingredient which is divided and accommodated in the two or more separate chambers of one container, so that the same medicinal ingredient is present in each of the two or more separate chambers.
